

Vježba 5: Sintaksa i osnovni elementi HTML-a

Maks Gregorić, Lovro Gršić 3.B

Priprema za vježbu:

1. Objasnite kraticu html. Za što se koristi taj jezik?

Hypertext Markup Language, koristi se za dodavanje sadržaja stranici.

2. Što se pomoću html-a opisuje i što on govori pregledniku?

Pomoću HTML-a se opisuje struktura web-stranice. On govori pregledniku kako da prikaže podatke što znači da je on markup jezik koji služi za određivanje oblika i vrste podataka.

3. Nabrojite pet editora html-a koji se mogu koristiti za stvaranje web stranica. Kako obično nazivamo osnovnu html stranicu?

VSCode, Notepad++, Atom, Sublime Text, brackets

Izvođenje vježbe:

1. Osnovni dijelovi html dokumenta

A. Ispunite tablicu

<!DOCTYPE html> označava da je tip dokumenta html

<html> označava početak html dokumenta

<head> zagлавље dokumenta

<title> označava naslov stranice koji će se pokazivati na vrhu browsersa

<body> označava tijelo dokumenta tj. sadržaj stranice

<h1>-<h6> označava tekst i oviseći o brojci koliko je velik

<p> paragraf

B. Skicirajte osnovu strukturu HTML stranice (https://www.w3schools.com/html/html_intro.asp). Označite dio koji prikazuje preglednik.

```
<html>
  <head>
    <title>Title</title>
  </head>
  <body>
    <h1>Main Heading</h1>
    <p>Paragraph</p>
    <h2>Sub Heading</h2>
    <p>Paragraph</p>
  </body>
</html>
```

C. Objasnite čemu u html elementima služe atributi i gdje se pišu.

U html-u atributi služe za postavljanje dodatnih informacija o elementima.

D. Istražite i objasnite kako se u pregledniku može vidjeti html kod neke web stranice (bar dva načina).

Ctrl+shift+i, ctrl+u

2. HTML elementi

A. Što podrazumijeva pojam ugnježđivanja html elemenata? Navedite primjer.

Postavljanje elementa u elementu

B. Čemu služi element
? Što znači da je to prazan element?

Br-break sluzi kako umetnuli prazan prostor, prazan je element jer ne treba nikakav sadržaj

C. Što preglednik automatski dodaje kod pisanja zaglavlja?

Preglednici automatski dodaju marginu prije i nakon zaglavlja.

D. Zašto je važno koristiti elemente zaglavlja?

Da dodamo meta-informacije, spojimo s drugim dokumentima, dodamo naslov, i postavimo neke osnovne podatke

E. Što preglednik automatski dodaje kod korištenja elementa <p>?

Također, preglednik automatski dodaje marginu prilikom korištenja elementa paragraph.

F. Čemu služi i kako se ispisuje <hr> element?

<hr> - element koji označuje prekid određenog dijela na HTML-u.

G. Objasnite <pre> element.

3. Atribut style

Sintaksa HTML style atributa je `<tagname style="svojstvo(CSS):vrijednost(CSS);">`. Čemu služi atribut style?

- ▶ 1. Ispunite tablicu:

background-color – boja pozadine elementa
color – boja teksta elementa
font-family – vrsta fonta
font-size – velicina teksta
text-align – poravnjanje teksta

4. HTML oblikovanje – elementi koji ispisuje posebne oblike teksta

- `` - podebljani tekst
- `` - važan tekst
- `<i>` - ukošeni tekst
- `` - naglašeni tekst
- `<mark>` - označeni tekst
- `<small>` - umanjeni tekst
- `` - obrisani tekst
- `<ins>` - ubačeni tekst
- `<sub>` - indeks
- `<sup>` - potencija

5. Praktičan rad

Napravite web stranicu odabranog pjesnika, pjevača ili grupe. Web stranica sadrži:

1. nekoliko detalja iz života (mali članak od nekoliko odlomaka, na hrvatskom jeziku).
2. naslove i tekstove tri odabrane pjesme (može biti i na stranom jeziku)
